Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

winstonhsu.uspto@gmail.com
Patent.admin.uspto.Rcv@naipo.com
mis.ap.uspto@naipo.com.tw

Office Action Summary	Application No. 10/708,458	Applicant(s) LI, HAN-YU	
	Examiner WILLIE J. DANIEL JR	Art Unit 2617	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 February 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to applicant's amendment filed on 19 February 2008. **Claims 1-9** are now pending in the present application. This office action is made **Final**.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 19 February 2008 has been entered.
3. All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory

period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by **Cheon (US 6,484,016 B1)**.

Regarding **claim 1**, Cheon discloses a radiotelephone which reads on the claimed “mobile phone” (see col. 4, lines 5-18; Fig. 5) comprising:

a first housing comprising a first rotating component with a first hole located at one end of the first rotating component (see col. 4, lines 53-58; Fig. 5);

a display panel installed on the first housing (see Fig. 5 ‘ref. 30’);

a second housing comprising a second rotating component with a second hole located at one end of the second rotating component and connected to the first rotating component, and a plurality of buttons installed on the second housing for inputting button signals (see col. 4, lines 19-24; col. 5, lines 10-13);

a flexible printed circuit (FPC) with a first end stretching from the first opening and a second end stretching from the second opening (see col. 4, lines 39-50);

a single rotating axis component having a first side for inserting into only an end of the first rotating component that is opposite the end of the first rotating component with the first hole, and a second side for inserting into only an end of the second rotating component that is opposite the end of the second rotating component with the second hole (see col. 4, lines 10-12, 53-58; Figs. 5-6), where the folder type portable radiotelephone has rotating axis (A) in which the single rotating axis component would be inherent to hinge the folder (20) and body element (10) as evidenced by the fact that one of ordinary skill in the art would clearly recognize;

a third housing connected to the first housing (see Fig. 5); and

a fourth housing connected to the second housing (see Fig. 5).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Cheon (US 6,484,016 B1)** in view of **Applicant's Admitted Prior Art** (hereinafter Prior Art) (see Description of the Prior Art; Figs. 1-4).

Regarding **claim 2**, Cheon teaches of the feature signal processing module installed in the first housing and the third housing, and a processing module installed in the second housing and the fourth housing the operation of the mobile phone, wherein the signal processing module respectively and the processing module are respectively connected to the first end and the second end of the FPC (see Fig. 5), where the mobile phone has a housing that is arranged to hold components such as a keypad and LCD in which there must be a signal processor and processor (see col. 4, lines 33-35; col. 5, lines 38-45). Cheon inexplicitly discloses having the feature(s) of signal processing module installed in the first housing and the third housing, and a processing module installed in the second housing and the fourth housing the operation of the mobile phone, wherein the signal processing module respectively and the processing module are respectively connected to the first end and the second end of the FPC. However, the examiner maintains that the feature of signal processing module installed in the first housing and the third housing, and a processing module installed in the second housing and the fourth housing the operation of the mobile

phone, wherein the signal processing module respectively and the processing module are respectively connected to the first end and the second end of the FPC was well known in the art, as taught by Prior Art.

As further support have in the same field of endeavor, Prior Art discloses the feature of signal processing module installed in the first housing and the third housing, and a processing module installed in the second housing and the fourth housing the operation of the mobile phone, wherein the signal processing module respectively and the processing module are respectively connected to the first end and the second end of the FPC (see Description of the Prior Art; Figs. 1-4).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Cheon and Prior Art to have the feature of signal processing module installed in the first housing and the third housing, and a processing module installed in the second housing and the fourth housing the operation of the mobile phone, wherein the signal processing module respectively and the processing module are respectively connected to the first end and the second end of the FPC, in order to provide a means of communication, as taught by Prior Art (see Description of the Prior Art; Figs. 1-4).

Regarding **claim 3**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 2), in addition Cheon further discloses the mobile phone of claim 2 wherein when the first opening of the first rotating component and the second opening of the second rotating component are on the same level, the FPC can be installed in the first opening of the first rotating component and the second opening of the second

rotating component, and when the first rotating component and the second rotating component are rotated, the first end of the FPC is connected to the signal processing module and the second end of the FPC is connected to the processing module (see Figs. 5-6).

Regarding **claim 4**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 3), in addition Cheon further discloses the mobile phone of claim 3 wherein the FPC is folded and installed in the mobile phone at an angle less than 360 degrees (see col. 4, lines 12-14).

Regarding **claim 5**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 2), in addition Cheon further discloses the mobile phone of claim 2 wherein the display panel is electrically connected to the signal processing module for displaying data from the signal processing module as an image (see col. 4, lines 29-35; Fig. 5 'ref. 30').

Regarding **claim 6**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 2), in addition Cheon further discloses the mobile phone of claim 2 further comprising a speaker installed in the first housing and the third housing and electrically connected to the signal processing module for converting data from the signal processing module into real sound (see col. 4, lines 29-35; Fig. 5 'ref. 210').

Regarding **claim 7**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 2), in addition Cheon further discloses the mobile phone of claim 2 further comprising a vibrator installed in the first housing and the third housing and electrically connected to the signal processing module for vibrating the mobile phone when receiving vibration signals from the signal processing module (see col. 4, lines 49-51).

Regarding **claim 8**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 2), in addition Cheon further discloses the mobile phone of claim 2 further comprising a microphone installed in the second housing and the fourth housing and electrically connected to the processing module for converting real sound into audio signals and transmitting them to the processing module (see col. 4, lines 14-16; Fig. 5 'ref. 50').

Regarding **claim 9**, the combination of Cheon and Prior Art discloses every limitation claimed, as applied above (see claim 2), in addition Cheon further discloses the mobile phone of claim 2 further comprising a radio module installed in the second housing and the fourth housing and processing module for electrically connected to the receiving radio signals to generate corresponding communication signals and transmitting them to the processing module, and outputting data from the processing module wirelessly (see col. 4, lines 5-10; Fig. 5), where the radiotelephone is used for communication in which the radio module is inherent as evidenced by the fact that one of ordinary skill in the art would clearly recognize.

Response to Arguments

6. Applicant's arguments filed 19 February 2008 have been fully considered but they are not persuasive.

The Examiner respectfully disagrees with applicant's arguments as the applied reference(s) provide more than adequate support and to further clarify (see the above claims for relevant citations and comments in this section).

7. Regarding applicant's argument of claim 1 on pg. 6, 2nd par., "...does not teach a single rotation axis component having a first side for inserting into only an end of the first rotating component that is opposite the end of the first rotating component with the first hole, and a second side for inserting into only an end of the second rotating component that is opposite the end of the second rotating component with the second hole...", the Examiner respectfully disagrees. Applicant has failed to appreciate the teachings of well-known prior art Cheon that clearly discloses the claimed feature(s) as would be clearly recognized by one of ordinary skill in the art. In particular, Cheon discloses the feature(s) a single rotating axis component having a first side for inserting into only an end of the first rotating component that is opposite the end of the first rotating component with the first hole, and a second side for inserting into only an end of the second rotating component that is opposite the end of the second rotating component with the second hole (see col. 4, lines 10-12, 53-58; Figs. 5-6), where the folder type portable radiotelephone has rotating axis (A) in which the single rotating axis component would be inherent to hinge the folder (20) and body element (10) as evidenced by the fact that one of ordinary skill in the art would clearly recognize. Therefore, as addressed above, the applied reference more than adequately meets the claim limitations.

Furthermore, Cheon (see Fig. 5) shows an extending piece that hinges (or connects) body element (10) with folder (20). As evidenced by the fact that one of ordinary skill in the art would clearly recognize, engineering design during fabrication of a portable radiotelephone allows for molding (or integrally) connecting separate pieces or tightly fitting (or fastening/mounting) separable pieces. Also, review previously cited reference Oshima (US 7,076,280 B2 - see Fig. 1 “ref. 3” and related text).

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to WILLIE J. DANIEL JR whose telephone number is (571)272-7907. The examiner can normally be reached on 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Appiah can be reached on (571) 272-7904. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
